Chatbot Instructions: Generating Suno AI Song Prompts

Objective: To generate effective and creative song prompts for the Suno AI platform, leveraging meta tags for emotional depth, genre bending, crowd involvement, and voice modulation, while adhering to prompt engineering best practices.

1. Core Prompt Structure:

Initial Input: Start with a clear and concise description of the desired song.

Example: "A rock song"

Improved Example: "A gritty, blues-infused rock song with heavy guitar riffs and a soulful vocal performance."

2. Enhancing Prompts with Meta Tags (Key Features):

2.1. Emotional Enhancement (`[Emotion verse]`, `[Emotion chorus]`, etc.):

Purpose: To infuse specific sections of the song with emotional tones.

Method: Place emotion tags directly before the relevant lyrics or section description.

Examples:

`[Angry verse]`

`[Sad chorus]`

`[Joyful bridge]`

Action: When a user requests a specific emotion for a song section, integrate the corresponding `[Emotion section]` tag.

2.2. Genre Bending (`[Genre section]`):

Purpose: To incorporate elements from different genres into specific song sections for originality.

Method: Use `[Genre section]` to instruct the AI to blend styles.

Examples:

`[Opera chorus]`

`[Dubstep bridge]`

`[Jazz intro]`

Action: When a user expresses a desire for genre blending, prompt them for which genres to combine and in which sections, then apply the `[Genre section]` tag.

2.3. Crowd Involvement (`[Crowd yells]`, `[Crowd singing]`, `[Cheers and applause]`):

Purpose: To simulate audience participation.

Method: Add these tags to sections where crowd sounds are desired.

Examples:

`[Chorus] [Crowd singing]`

`[Outro] [Cheers and applause]`

Action: If a user wants audience interaction, integrate the appropriate `[Crowd tag]` into the relevant song section.

2.4. Voice Modulation (`Chorus Modulate Up a Key`, `Verse Modulate Down a Key`):

Purpose: To dynamically change the key for emphasis or unique endings.

Method: Specify the modulation within the prompt for the desired section.

Examples:

`[Chorus] Chorus Modulate Up a Key`

`[End] Song ends with a gradual fade and a final Chorus Modulate Up a Key`

Action: If a user requests a key change, apply the `Modulate Up/Down a Key` instruction to the specified section.

3. Prompt Engineering Best Practices (General Guidelines):

3.1. Descriptive Language:

Guideline: Use vivid, specific language to describe mood, style, and instrumentation. Avoid vague terms.

Poor Example: "A nice song."

Good Example: "An uplifting, orchestral soundtrack with sweeping strings and a sense of hope."

Action: Encourage users to be descriptive and offer suggestions for more evocative language.

3.2. Keywords:
Guideline: Include relevant keywords that align with the desired music type.
Examples: "epic," "orchestral," "soundtrack," "heavy," "soulful."
Action: Suggest relevant keywords based on the user's initial genre or mood descriptions.
3.3. Emotional Cues (Overall Song Mood):
Guideline: Explicitly state the overall emotion the music should evoke.
Examples: "A melancholic melody," "an uplifting chorus," "a sense of longing and hope."
Action: Ask the user about the overarching emotional feel they want for the song.
4. Iterative Process (For Chatbot Interaction):
Guideline: Remind the user that AI music generation is iterative.
Action:
Generate a prompt based on user input.
Present the prompt and ask for feedback ("How does this prompt look? What changes would you like?").
Offer to refine the prompt based on user feedback, emphasizing the trial-and-error nature of the process.
Suggest further experimentation with different meta tags if initial results are not satisfactory.

According to leading music industry publications, ai Music generators are responsible for creating a staggering number of tracks. This prolific output signifies a major shift in how music is produced and consumed. The sheer volume of AI-generated Music underscores the need for techniques that can help individual creators stand out from the crowd.The key is to infuse these AI creations with the emotional depth and Originality that resonate with listeners.

Emotional depth and originality are the critical differentiators between generic background music and truly captivating songs. AI, by its nature, relies on algorithms and data Patterns. However, music is deeply human, reflecting emotions, experiences, and unique perspectives. Bridging this gap requires strategic intervention, leveraging tools, techniques, and a creative vision to guide AI toward more expressive outputs. The number of AI songs continue to grow at a rapid pace and one needs to be able to create unique songs using the AI Tools available.

As the availability of AI music generation tools increases, it's becoming easier to find the music business jobs related to this new field. With the AI music explosion here's how you can stand out from the crowd

Meta Tags: The Secret Ingredient
Meta tags are essentially Hidden instructions that guide the AI in shaping the song's structure, mood, and style. While many users are familiar with basic meta tags like specifying the verse or Chorus, the real power lies in customizing these tags to inject specific emotions and stylistic nuances. The ability to change these tags unlocks a new level of control over the AI's creative process. By manipulating meta tags, you can nudge the AI towards a more nuanced and emotionally compelling sound, giving your music a distinctive edge. You can create indie rock, stoner rock, german pop and more using meta tags within AI tools.

Many people may not be aware that these tags can be changed and in doing so, enhance emotion and originality in your songs. There are a few secret meta tags to use to improve your ai generated music .

Secret Meta Tags for Emotional Enhancement
Adding Emotion to Verses
One of the most impactful secret meta tags involves adding emotion directly to specific sections of your song. Instead of simply labeling a section as "Verse 1," try using tags like [Angry verse] or [Sad verse]. This subtle cue tells the AI to infuse that particular section with a specific emotional tone, guiding the melody, instrumentation, and vocal delivery

For example, the presenter used lyrics that were created using ChatGPT to create an Indie Rock song with a male vocalist . Instead of writing "Verse 1" before the Lyrics, the presenter writes [Angry verse] . This will influence the song to take on a more angry tone. The presenter also tested using Udio to create music .

By experimenting with different emotional tags, you can craft a song that takes listeners on an emotional journey, with each section contributing to the overall narrative. This technique is particularly effective for AI-generated lyrics, which can sometimes lack the emotional nuance of human-written verses. By explicitly guiding the AI, you can overcome this limitation and create songs that genuinely connect with listeners on an emotional level.

Experimentation is key when trying to implement emotion to meta tags . Certain AI son generators respond more effectively to the meta tag. This involves a level of trial and error to see how the AI interprets the different meta tags. This experimentation will also ensure the feel that you want in your song.

Genre Bending
While specifying a genre is a standard practice, pushing the boundaries of genre can lead to unexpected and compelling results. Try blending seemingly disparate genres through creative meta tagging. For example, you could experiment with tags like [Opera chorus] or [Dubstep bridge], instructing the AI to incorporate elements from those genres into specific sections of your song

The results may be unconventional, but they can also be incredibly innovative. This approach is particularly effective for injecting originality into your AI music, as it forces the AI to think outside the box and create something truly unique. By challenging the AI's preconceived notions of genre, you can unlock entirely new Sonic landscapes and create music that defies categorization .

Crowd Involvement
Meta tags can be used to guide AI on how to perform songs in concert. You can add elements such as [Crowd Yells] or even [Crowd Singing]
. This is especially helpful during a pop song because crowd involvement in pop can help improve the quality. These tags cue the AI to incorporate backing vocals or harmonies from the crowd, creating a more immersive and engaging listening experience. The way this is set up during the chorus, can help improve the quality of a song.

Adding crowd like involvement can be done using suno or udio .

Voice Modulation
To add a unique element to your songs, voice modulation can be used to enhance the sonic qualities of a song. For example you can add
Chorus Modulate Up a Key which will modulate the key. This can be used during the end of songs to create a unqiue ending. In addition voice modulation can also be used during the song as well. In doing so, there will be a dynamic and constant change to the song.

Using a key change helps create a moment of excitement and renewed attention during a live performance . The most common uses of key changes involve modulating up a half or whole step, which can make the song feel brighter and more energetic. With a shift this gives the listener a fresh perspective.

How to Use AI Music Generators Effectively
Prompt Engineering

A well-crafted prompt is the foundation of any successful AI music generation project. Think of the prompt as a detailed brief for the AI, guiding it towards the desired outcome. The more specific and descriptive your Prompt, the better the AI will be able to understand your vision and Translate it into music.

Descriptive Language: Use vivid language to describe the mood, style, and instrumentation you're aiming for. Instead of simply saying "a rock song," try something like "a gritty, blues-infused rock song with heavy guitar riffs and a soulful vocal performance."
Keywords: Incorporate Relevant keywords that Align with the type of music you want to create. For example, if you're creating a cinematic piece, use keywords like "epic," "orchestral," "soundtrack," and "sweeping strings."
Emotional Cues: Explicitly state the emotions you want the music to Evoke. Use phrases like "a melancholic melody," "an uplifting chorus," or "a sense of longing and hope."
By carefully crafting your prompts, you can significantly increase the likelihood of generating music that aligns with your artistic vision
Layering and Arrangement
AI music generators can often produce impressive individual elements, but the arrangement and layering of these elements is crucial for creating a polished final product. Don't be afraid to experiment with different arrangements, muting certain tracks, adding effects, and adjusting the mix to achieve the desired sonic landscape. Layering is also key to improve the complexity of the music.

Iterative Process
AI music generation is rarely a one-shot process. Expect to generate multiple iterations, refining your prompts, adjusting meta tags, and experimenting with different settings until you achieve the desired outcome. Treat each generation as a learning opportunity, analyzing what worked, what didn't, and how you can guide the AI more effectively in the next iteration.

This iterative process is similar to traditional music production, where artists often experiment with different arrangements, melodies, and lyrics before settling on the final version. Embrace this process of refinement and don't be discouraged by initial results that don't quite meet your expectations. The key is to keep experimenting and learning until you unlock the full potential of AI music generation
Yes, I revised the "How to Use AI Music Generators Effectively" section of the article, converting it into an instructive format for a chatbot. My goal was to make it clear for a chatbot how to generate song prompts for the Suno AI platform, using the information about meta tags, genre bending, crowd involvement, voice modulation, and prompt engineering best practices from the document.

Additional Genres	Additional Style Tags	Genres	Style Tags
Afrobeat	Acapella	A Cappella	Acoustic
Alt-Country	Bass-heavy	Ambient	Analog

Ambient sounds for Suno Music Creating
[announcer] - Used to indicate a section where an announcer is speaking.
[applause] - Indicates the presence of applause in the background.
[audience laughing] - Signals that the audience is laughing, useful for live performances or shows.
[barking] - Use this tag when you want to include the sound of a dog barking.
[beeping] - To add a beeping sound, like an alarm or notification.
[bell dings] - Signifies the sound of a bell dinging.

[birds chirping] - To incorporate the ambiance of birds chirping.
[bleep] - Indicates a bleep sound, often used to censor words.
[boy] - Use this tag to specify content delivered by or related to a boy.
[censored] - Marks content that is censored.
[cheering] - To include the sound of a crowd cheering.
[cheers and applause] - Indicates both cheers and applause from an audience.
[chuckles] - Signifies chuckling sound.
[clapping] - To add the sound of clapping.
[clears throat] - Used when someone is clearing their throat.
[cough] - Indicates a coughing sound.
[female narrator] - Specifies content narrated by a female.
[female] - Use this tag for content delivered by or related to a female.
[fighting] - To include sounds or references to fighting.
[giggles] - Signifies giggling sounds.
[giggling] - Another tag for giggling sounds, perhaps in a different context or intensity.
[girl] - Use this tag to specify content delivered by or related to a girl.
[groaning] - To add a groaning sound.
[man] - Use this tag for content delivered by or related to a man.
[phone ringing] - Indicates the sound of a phone ringing.
[reporter] - Specifies content delivered by a reporter.
[ringing] - To add a generic ringing sound.
[screams] - Signifies screaming sounds.
[sighs] - Used to include a sighing sound.
[silence] - Indicates a moment of silence.

[squawking] - To add the sound of squawking, like a bird or an alarm.
[upbeat music] - Use this tag to indicate a section with upbeat music.
[whispers] - Signifies whispering sounds.
[whistling] - To include a whistling sound.
[woman] - Use this tag for content delivered by or related to a woman.
Personalized music experiences

[upbeat music] - Use this tag to indicate a section with upbeat music.
[whispers] - Signifies whispering sounds.
[whistling] - To include a whistling sound.
[woman] - Use this tag for content delivered by or related to a woman.
Personalized music experiences
Chirp
[Chorus] - Indicates the part of the song meant to be the chorus.
[Intro] - Marks the introduction section of a track.
[Outro] - Signifies the outro or closing section of the music piece.
[Verse] - Used to denote the verse part of a song.
[Acoustic] - Points to an acoustic style of music.
[African] - Tags the music with African influences or origins.
[Alternative metal] - Identifies the song as belonging to the alternative metal genre.
[Alternative pop] - Marks the song as alternative pop in style.
[Ambient] - For music that has an ambient, atmospheric feel.
[Atlanta rap] - Denotes rap music that originates from or is styled after Atlanta's rap scene.
[Ballad] - Marks the piece as a ballad, often slow and emotive.
[Baroque] - Indicates music influenced by or made in the Baroque style.
[Blues] - Tags the music as belonging to the blues genre.
[Boom bap] - Signifies a style of hip-hop that includes hard-hitting beats, often known as Boom bap.
[Cello] - For pieces that feature the cello.
[Chill] - Tags music that has a relaxed, chill vibe.
[Christian & Gospel] - Indicates the music belongs to the Christian & Gospel genres.
[Christmas] - For music that fits the Christmas holiday theme.
[Country & Americana] - Marks the music as part of the country or Americana genres.
[Dance & Electronic] - For music that falls under dance or electronic categories.
[Drums] - Indicates a focus on or significant use of drums.
[EDM] - Tags the track as Electronic Dance Music.
[Girl group] - To denote music by or in the style of a girl group.
[Gospel] - Marks the piece as gospel music.
[Hardcore rap] - Indicates a hardcore rap style.
[Heavy metal] - For music in the heavy metal genre.
[Hip hop] - Tags the music as hip hop.
[Indie] - For music that is considered independent or indie in style.
[Indie rock] - Marks the track as indie rock.
[J-pop] - For music in the Japanese pop genre.
[Jazz] - Indicates jazz music.
[K-pop] - For Korean pop music.
[Lo-fi] - Tags the music with a lo-fi, understated quality.
[Orchestra] - Denotes an orchestral music style.
[Party] - For tracks that set a party mood or vibe.
[Piano] - Indicates significant use of the piano.

[Pop] - Tags the track as pop music.
[Pop-Rock] - For music that blends elements of pop and rock.
[Post-Hardcore] - Indicates a post-hardcore style in music.
[Punk Rock] - For music belonging to the punk rock genre.
[R&B] - Marks the piece as rhythm and blues.
[R&B & Soul] - Indicates a mix of R&B and soul music.
[Rap] - Tags the track as rap music.
[Reggae] - For music with reggae elements.
[Rock] - Indicates rock music.
[Romantic] - For music with a romantic theme or tone.
[Soul] - Marks the track as soul music.
[Synth] - Denotes a significant use of synthesizers.
[Synth pop] - For music in the synth-pop style.
[Techno] - Tags the music as techno.
[Uk] - Could indicate music from or influenced by the United Kingdom.
